LEATHER BELTS

MODEL EXIMS

A B O U T U S

MODEL GROUP was first established in 1982 by Late Haji Mehboob Alam for production of vegetable tanned belt and sole leather. It was after the year 1986 that MODEL GROUP started chrome tanning vital for the production of safety footwear. Chrome tanning aided the development of upholstery leather for furniture on buffalo hide.

In 2011 MODEL GROUP was restructured with MODEL EXIMS being assigned to Mr. Mahmood Alam and Mr. Badre Alam. MODEL EXIMS was re-established as a leading supplier of finished upholstery leather. Since then MODEL EXIMS has further developed leather for shoes, belts, bags and automotive upholstery. The company also manufactures safety shoe uppers, bags and belts.

AIM

Our aim is to provide quality leather and complete customer satisfaction. To achieve this, the firm has a laboratory for continuous research and development to improve quality and performance of leather. The tannery is equipped with the latest and most advanced machinery so as to keep the quality of the leather in check. We believe in updating the machinery and the process so as to deliver better leather on time. We know the importance of trust that the customer places on us and we have always tried our best to deliver.

ENVIRONMENT, POLLUTION AND SOCIAL RESPONSIBILITY

MODEL GROUP believes in holistic growth and development without compromising environment. Apart from the chrome recovery unit and sludge drying beds; rotary disk filters for the filtration of fine particles, dissolved air floatation device, filter press and dual media filter have been installed. Environmental protection is fundamental for sustainable growth and the extensive equipment's installed helps to improve environmental performance of the company. Water quality is monitored at each stage to ensure proper functioning of treatment and to ensure discharge quality meets compliance. The effluent discharged from the tannery is further treated at the Common Effluent Treatment Plant.
